**Let's Start!****Programming: a Complete Toolbox****Learning Outcome:**

Describe the development of software programming in simple spoken and written situations.

Ask your partner:

- What are the functions of a software programmer?
- What kind of daily activities are easier to do using a computer? Why?

Can Do Statements:

- I can talk about the importance of computer programming in everyday life.
- I can say what I need to know in a program.
- I can talk about the contents of a programming toolbox.

Let's Explore!

Programming is useful in everyday life.

Instructions: Read the text below.

Richard: Hi. What's your name?

Oscar: My name is Oscar.

Richard: Good to see you, Oscar. What do you do for a living?

Oscar: I study. I'm a student of programming.

Richard: That sounds interesting! I wonder what the importance of computer programming is in everyday life.

Oscar: Actually, it's a really big deal. Computers are so useful thanks to software programming. It is essential to understand common problems in life and provide solutions.

Richard: So, how do you program a computer?

Oscar: When you program, you design codes or instructions in a programming language in a way that this stuff is understandable for any computer to do a specific task. Programmers create a process or operations called algorithms. As a result, computers perform smoothly many functions thanks to programs.

Richard: How do you make a program?

Oscar: Let's say that a program is a compendium of instructions. A programmer divides the problem into chunks or blocks, he creates commands and describes the steps to a computer in order to solve the issue.

Richard: How does a programmer solve everyday problems?

Oscar: A programmer offers to solve the problems through the analysis of each step of a difficult process. Let's see the next example when an ATM needs to make faster transactions, a professional, who knows all the security steps and protocol, programs the machine with codes from the programming toolbox.

Richard: What does a programming toolbox contain?

Oscar: It has the set of commands which do various things in a program. These functions are related to math, logic, and five kinds of programming instructions, as well as the integration of all those elements in an algorithm.

Richard: Good! I think you are able to structure so many programs with that.

Oscar: Yes, I am. But remember programmers also need creativity, so let's your imagination run free.

**Let's Practice!**

Let's see the advantages of programming in daily life!

Instructions: Select the correct answer.

What are the main advantages of computer programming in life?

1. Computers are so useful thanks to software programming.
2. It is essential to describe and provide solutions to common problems in life.
3. All banks activities are based on programming and giving customers loans.
4. It is important to solve math and logic problems in a class.
5. It is fast by solving difficult tasks as transactions, purchases, or payments.

**Let's Practice!**

Programming is not a simple task.

Instructions: Read the sentences. Write the missing word(s) in the blank.

Use: perform, creates, program.

1. You _____ making instructions in a programming language understandable for any computer
2. Computers _____ smoothly many functions thanks to programs.
3. A programmer _____ commands and describes the steps to a computer to solve a problem.

Extension Activity

Drawing programming toolbox features.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about programming toolbox.
- Create a mind map in which you describe the features of a toolbox.
- Use the verb to be in affirmative form in your sentences.
- Show your mind map to your teacher.

Self-Assessment

- | | Yes | No |
|--|-----------------------|-----------------------|
| 1. I look for information about programming toolbox. | ☐ | ☐ |
| 2. I design a visual aid to explain features of programming toolbox. | ☐ | ☐ |
| 3. I use the verb to be in my sentences. | ☐ | ☐ |
| 4. I talk about programming toolbox. | ☐ | ☐ |

Target Words

- **ATM machine** (noun): an electronic banking channel open to customers that allows them to make basic transactions.
e.g. An ATM needs to make faster transactions, consequently a professional, who knows all the security steps and protocol, programs the machine with codes from the programming toolbox.
- **chunk** (noun): a small part of something, a part of a divided entity or a significant amount of something
e.g. A programmer takes a problem, divides it into chunks or blocks.
- **understandable** (adjective): that is comprehensible and anyone can understand this.
e.g. You design codes or instructions in a programming language in a way that this stuff is understandable for any computer to do a specific task.
- **compendium** (noun): a collection of elements that are normally presented as a group.
e.g. A program is a compendium of instructions.
- **algorithm** (noun): a set of instructions designed to carry on a specific task, it can be a complex operation
e.g. Programmers create a process or operations called algorithms.
- **logic** (noun): a correct and reliable inference, a method of reason and arguments.
e.g. These functions are related to math, logic, and five kinds of programming instructions.

Learning Points

Verb To Be In Affirmative Form

You use the simple present tense to talk about general actions, routines, general states or habits of a subject. The verb to be is one of the most important verbs in English because it has different functions and structures.

You use the verb **to be** in affirmative to express the present conditions of something.

Verb TO BE Conjugation	Contractions
I am	I'm
You are	You're
He is	He's
She is	She's
It is	It's
We are	We're
You are	You're
They are	They' re

Examples

- *I study. I'm a student of programming.*
- *It is essential to understand common problems in life*
- *Computers are so useful thanks to software programming.*
- *A program is a compendium of instructions.*

Learning Points

Action Verbs in Present - The Job of a Software Programmer

Action verbs precise something that a person or object is able to do.

Actions verbs imply movement, activities and have a full meaning.

Examples of verbs related to programming: assemble, develop, design, execute, identify, improve, operate, process, repair, update, simplify.

Examples:

- A programmer **reviews** systems and software applications.
- Programmers **improve** systems processes
- You **produce** programming codes and specify details of tasks.
- I **test** software to make sure codes are right.

Examples

- You **design** codes or instructions in a programming language.
- Programmers **create** a process or operations called algorithms.
- A programmer **takes** a problem, and **divides** it into chunks.
- I **think** you are able to structure so many programs.
